

Make Greener automation

CORPORATE PROFILE

Contributing to the future designs and past assets of automation

Message From The President

In January 2024, M-System Co., Ltd. changes its name to MG Co., Ltd. Our company policy is unchanged despite the new name.

For about 50 years, we have been supplying interfacing component devices in the fields of PA/FA/BA. The company's expertise is a collection of elements that cannot be achieved with digital circuits alone. It includes analog circuit technology, high-voltage isolation technology, and low-consumption and low-noise power supply design.

In the FA field, various field network technologies, miniaturization, and specialization has been required, and it is the synergy of analog and digital technologies that has been creating new products. At the same time, the semiconductor production equipment market has been experiencing increasing demand for the production of the previous generation of equipment, which requires continuity in factory production.

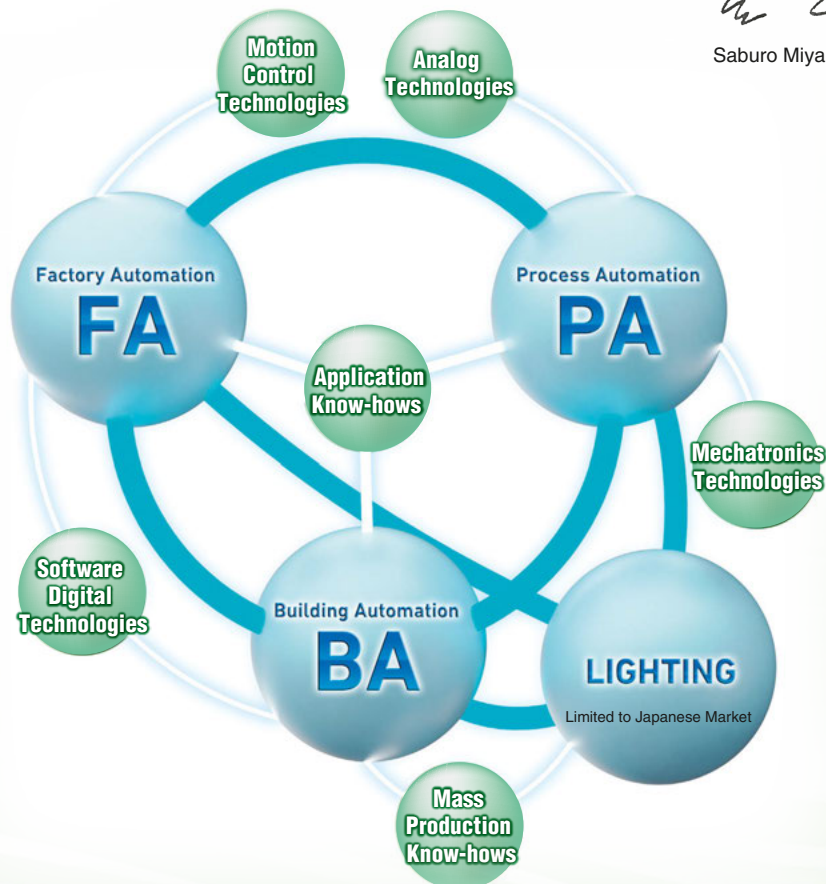

In the BA field, we are contributing to carbon neutrality by creating convenient and environmentally friendly products with next-generation network technology.

MG Co., Ltd. will continue supplying convenient and reasonably priced products for various types of automation. We are also determined to play a role in the next generation as a cornerstone of Japanese economy to the best of our ability by developing and supplying products that can promote Sustainable Development Goals (SDGs).

We will continue to create new values in our products while valuing the relationship of trust with our customers.

Saburo Miyamichi, President

Products

For more than fifty years, SCADA have been offering a wide range of instrumentation / automation components used for process, factory and building automation, from the field level up to the control room level.

We are your supply partner for the interfacing applications of analog/discrete signals, communication networks and intelligence systems.

(*) Mobile terminals (smartphones, tablets) or mobile network operator services are not our products.

Our Policies

CUSTOMERS FIRST

All products and services are provided outside Japan through our authorized distributors.

We are trying to enhance the customer satisfaction with the following five service policies.

As to the terms and conditions of a specific service, consult us for details.

1. Continued Products Availability

- We have basic policy of never to discontinue our products without providing compatible replacements.
- We always strive to procure all the electronic parts for our products. When a certain electronic part is no longer available, we will make best effort to provide a product compatibly replaceable with the existing product as long as there is substantial demand for such product.

2. Fast and Precise Delivery

- The standard manufacturing lead time for most of our products is 5 days.
- Quick Service Center is available for 24-48 hours shipment.
- Once a delivery time is promised, the customer can of course count on us to deliver them precisely on time.

3. Special Specifications Service with no extra charge

- Special specification products can be supplied without additional charge for major product series, except for those requiring excessive labor or materials.
- We are putting our effort into expansion of the scope of Special Specifications Service to all of our products. Special Specification Service will be available to more product series in the future.

For detailed terms and conditions applicable to each specific product, consult us.

4. Special Repair Service

- During the service period of 36 months from the date of shipment, we will provide free repair service for a damage or malfunction caused by a user's mistake when we determine at our discretion that cause of the damage or malfunction falls into the "Service Coverage" set out as conditions of this service. Such free repair service will be limited to one repair per cause of the damage or malfunction.

For detailed terms and conditions applicable to each specific product, consult us.

5. Factory Setting Service with no extra charge

- Configuration setting for programmable products is free of charge upon the customer's request for once when ordering, except for those requiring special engineering (e.g. multi-function PID controllers).

For detailed terms and conditions applicable to each specific product, consult us.

Our Commitment

INNOVATION

Product Development System

We have been engaged in the development of products featuring the analog circuit technology accumulated over 50 years.

Combining our own kind of analog technology and the latest digital circuit technology, we continue to supply new products at reasonable price, which are convenient to use and meet market demand.

The continuous emphasis to budgetary and human resources ensures about 100 models of newly released products every year, which lead the market and satisfy the ever-evolving needs of industries.

FLEXIBILITY

Computer-integrated flexible manufacturing systems for high-mix, low-volume production

We use the production master server to manage necessary information for the make-to-order system and manufacture the products one by one in order to realize the high-mix, low-volume production in short lead times.

Production program is automatically created and executed by every cycle of chip mounting process according to received orders so that there is no need of stocking half-assembled products. 2D codes containing the program information specific to an ordered product is printed on every printed circuit board at the first stage and referred to at every later step of production and testing.

This computer managed production system eliminates human error factors to the limit, ensuring high productivity and reliability.

Fully computer supported test/inspection line

Surface mounted parts

Mixed PCB surface mounting line

RELIABILITY

Meeting quickly for modern need for EMC countermeasures

EMC countermeasures combining EMI and EMS components provide the basic means of dealing with electromagnetic radiation. These countermeasures must be incorporated from the product design and development stage.

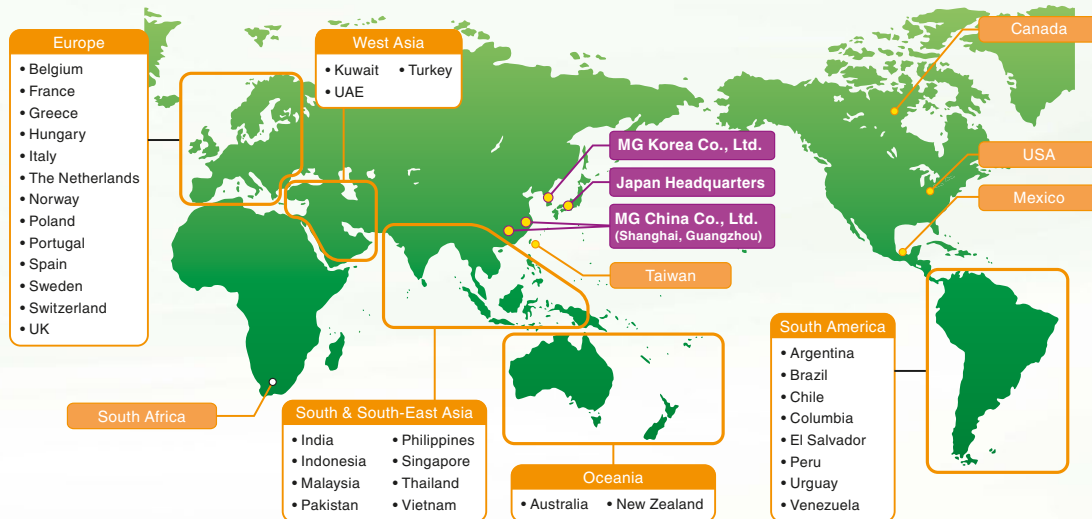

While many equipment manufacturers rely upon public testing facilities to verify the compliance of their products with Europe's mandatory CE marking program, we have our own RF anechoic chamber and shielded room facilities, Kyoto Techno Center, in order to speed the development of new products.

RF Anechoic Chamber

WORLDWIDE PRESENCE

Global Sales Network

Find Complete Product Information on Our Global English Website.

Services & Support

You can access all downloadable materials including setup tools (software), drivers and device profiles, catalogs and videos.

Demo Site

Access demo sites to view standard and user-configured monitoring windows of web-enabled data loggers and other products.

Video Library

Videos on the products and the company, educational materials, virtual exhibition can be viewed on YouTube.

Specifications & Manuals

Enter either a product model number or a keyword to search for data sheets, instruction manuals and other related documents. Compare specifications to find exactly what you need. You can narrow your search by product categories.

Product Category Index

Go directly to a product category to find more about our products.

Application Examples

Find products suitable for your application fields.

Regional Language Websites

Product information including data sheets, instruction manuals and videos is available in multiple languages.
