### CAUTION

- 1) This unit's output waveform is not uniform due to its scaling method. The user must be aware that it may be inconvenient for certain types of application.
- 2) This unit is designed to accept at the maximum of 100 kHz, which may cause errors due to chattering in the input pulses. Use input relays which do not cause chattering. Other relays could be used only with a CR filter, for 10 Hz at maximum.
- 3) Use the Model M2PRU instead of this unit in conjunction with the pulse output from our power transducers.
