• **Unused Input Channels**
Close across the unused input terminals with a resistor (5kΩ, 0.5W) as shown below.

INPUT 1   INPUT 2   INPUT 3   INPUT 4

5kΩ (0.5W)   1   3   6   8

2   4   7   9
Unused channels left open are equal to the input lower than -15%, which sets a data abnormality at the PLC or the host device.
Unused channels can be specified and set so on the PC Configurator Software (model: R3CON) without needing to connect resistors at the field terminals.
