RESPONSE TIME

Response time of discrete input module is the time till when the unit starts sending to a transmission line when a signal is applied to the input module.

T_{COM} : MECHATROLINK-III transmission cycle configured by a host device.

MECHATROLINK-III transmission cycle varies depends on system and configuration.

T_{INP} : Response time of input module $\leq T_a$ Delay of input circuit (ON delay time or OFF delay time) +

T_b Read rate setting time +

T_c Internal processing delay time (2 cycle of MECHATROLINK-III transmission cycle)

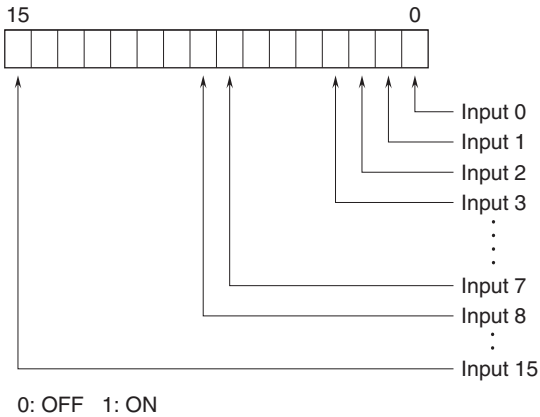

E.g. Read rate of 1 msec., MECHATROLINK-III transmission cycle of 0.25 msec.

Response time of input module (T_{INP}): Delay of input circuit (0.2 msec.) + Read rate setting time (1 msec.) + Internal processing delay time (0.25 msec.) $\times 2 = 1.7$ [msec.]
