## RESPONSE TIME

Response time of discrete output module is the time till when the module outputs a signal when the unit completes receiving from a transmission line.

$T_{COM}$ : MECHATROLINK-III transmission cycle configured by a host device.

MECHATROLINK-III transmission cycle varies depends on system and configuration.

$T_{OUT}$ : Response time of output module  $\leq T_d$  Internal processing delay time (1 cycle of min. transmission cycle units can handle)  
+  $T_e$  Delay of output circuit (ON delay time or OFF delay time)

E.g. MECHATROLINK-III transmission cycle of 0.5 msec.

Response time of output module ( $T_{OUT}$ ): Internal processing delay time (0.125 msec.) + Delay of output circuit (0.5 msec.)  
= 0.625 [msec.]
