PULSE INPUT SETTING Necessary when input code B is selected.
Fill in blank sections or mark ❏ with ✔ if necessary.

❏ B: DC VOLTAGE PULSE (other than code C or D spec.)

ITEM	SET VALUE	DEFAULT	COMMENTS
PULSE AMPLITUDE	V p-p	*MUST BE SPECIFIED*	Specify within 2 – 50 V p-p.
DC OFFSET	V	*MUST BE SPECIFIED*	

Note: Set the threshold level within 2 - 10 V. Basically set it to DC offset, but set to 2V when the DC offset is less than 2V, and set to 10 V when the DC offset is more than 10 V. In that case, pulse amplitude must surely cross the threshold level. If the amplitude is insufficient, it will not be able to follow the high frequency.

PULSE OUTPUT SETTING Specify when one-shot output is required.

PULSE WIDTH	❏ One shot Code 2 msec.	5 msec.	Specify within 1 – 30 msec. (For output other than relay contact)
		10 msec.	Specify within 10 – 30 msec. (For relay contact output)
	❏ One shot Code 3 msec.	50 msec.	Specify within 30 – 1000 msec.

PULSE LOGIC SETTING
Refer to next page.

PULSE LOGIC SETTING Choose required input-output pulse logic relation and mark ❏ with ✔ .

The pulse width in one-shot means the bold lined section of a pulse waveform.

▨▨▨ Shades indicate default setting.
