■ OUTPUT AT THE LOSS OF COMMUNICATION

CHANNEL	SET VALUE	DEFAULT VALUE	Factory Internal check
OUTPUT 1 to 4	□ OUTPUT HOLD □ OUTPUT OFF	OUTPUT HOLD	□

■ OUTPUT HOLD or OUTPUT OFF

In normal conditions, the module outputs the signal from the preferred bus A. When an error is detected, the output is switched to the data from the bus B.

▪ Output Hold

If both are in error, the module holds the signal and stands by until one of the communications recovers.

▪ Output OFF

If both are in error, the module outputs -15 % (or approx. -11.5 V) and stands by until one of the communications recovers.

At the startup, it outputs -15 % (or approx. -11.5 V) until the communication is established and normal data is received.

■ DATA RANGE

Set zero and full scale to each channel (zero scale to full scale)
